

Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is a tool made out of top quality materials meant to endure the most difficult operations and work environments. This piece of equipment enables drivers to be able to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more precise lifting and placement in a faster and much more effective way.

The fork pocket is quite unique and can enable the individual operating it to safely sway the forks into position without any worry of damaging the positioning cylinders. This can allow the driver the choice to execute independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into fork positioners on available units.
